Component Test Procedure (CTP) Checklist **(CTP_CHECKLIST_WORD.doc 10/24/07)**	**ACM Project:**	**FMS2000**
	ACM Sub-Project:	**A3XX**
	SCR Number:	**58390.00**
	Affected Area:	**TESTS**

Overview: CTPs are generated to verify an individual software element or group of elements properly implement requirements the software element(s) trace to. Use this checklist to inspect test cases and associated test procedures, drivers, and stubs against requirements the software element(s) implement. The CTP(s) are verified to conform to standards, and fully test requirements with appropriate structural coverage. The associate tracing data and test coverage analysis/disposition data (if any) is also verified.

Misc Info Reference: FMS Test Process C71-5780-043, Section 5.

Yes	No	N/A	Administrative
◉	○	○	1. Do the CTPs elements follow the standard naming conventions? CTP_<A/C>_<FAREA>_<FUNC-NAME>.TDF file – CTP Test Definition File CTP_< A/C >_<FAREA>_< FUNC-NAME >.ZIP file – miscellaneous test related files CTP_< A/C >_<FAREA>_< FUNC-NAME>.TRT file – CTP Trace file(Core only)
			CTP elements configured in the CM tool:
◉	○	○	2. Is *.TDF file – CTP Test Definition File present?
◉	○	○	3. Is *.ZIP file present?
○	○	◉	4. Is *.TRT file – CTP Trace file present (Core only)?
			Review Packet information details:
◉	○	○	5. Is SCR Number and a copy of the SCR (Sec state) present?
◉	○	○	6. Is TDF, TRT(If present), ZIP files with correct generation information present?
◉	○	○	7. Support files (SRD, SDD, and Checklist) with Generation information.
◉	○	○	8. Does the review packet contain a difference listing of the old test to the new test and are the differences limited to the changes specified in this SCR?
◉	○	○	9. Is the version of the material under review and supporting material correct for the SCR(s)?
◉	○	○	10. Has the material/version been identified on the cover sheet of the review packet (may reference SCR)?
◉	○	○	11. Have all SCR fields (e.g. Analysis/Solution) been filled out properly?

Yes	No	N/A	TDF (CTP Test Definition File)

Does the TDF header include the following fields:

12. Does the TDF header include the following fields:
    - Filename
    - Title
    - Author
    - Creation Date
    - Modification History
    - Source
    - Description of TDF
13. Is the SCR number and description updated for this SCR?
14. Does the TDF header include a unique ANCHOR name for this CTP?
15. Is the list of SRD/SDD element references (and their generation numbers) updated and correct? (including formatting of this information)

Yes	No	N/A	ZIP File (CTP Related Miscellaneous Files)

16. Does the ZIP file contain the updated necessary test files ?
    - *.BAT
    - *.CUL
    - ~~*.DRV~~ (*_D.ADA)
    - ~~*.VER~~ (*.RST)
    - *.RPT
    - Optional files: STB, DSP, and INC (if necessary).
    - Has the *.CUL file been updated to show the correct span of source code procedures/functions that are being tested by this CTP?

Yes	No	N/A	TRT File (Core only)
◉	○	○	17. Does the TRT header include the following fields: • Filename • Title • Author • Creation Date • Modification History • Is the modification history with date, author, SCR number, and description updated?
◉	○	○	18. Has the traceability matrix been updated/verified (trace to the correct requirements)??

Yes	No	N/A	Test Case Design
◉	○	○	19. Are the test case ID numbers present in sequential order?
◉	○	○	20. Does the test script have test case descriptions which describe the objectives, intent, and operation for each test case?
◉	○	○	21. Are all the allocated requirements tested?
○	○	◉	22. If anchor is found to be a bad trace or vague/ambiguous, has it been disposed with a reference SCR.
◉	○	○	23. Does the test case description section of each test case identify the specific requirements (SRD anchors) that are being tested?
◉	○	○	24. Does the test case description section of each test case identify the specific requirements (SRD anchors) that are supporting requirements?
◉	○	○	25. To ensure robust testing, are all test cases inputs set with at least 2 different values?
◉	○	○	26. To ensure robust testing, are boundary conditions and tolerances tested where ever applicable?

Yes	No	N/A	Test Case Design con't
◉	○	○	27. Coverage Levels – Has every point of entry and exit in the program been invoked at least once?
◉	○	○	28. Coverage Levels – Has every decision in the program taken on all possible outcomes at least once?
○	○	◉	29. Coverage Levels – Has every condition in a decision in the program taken on all possible outcomes at least once?
○	○	◉	30. Coverage Levels – Has every condition in a decision been shown to independently affect that decision's outcome? A condition is shown to independently affect a decision's outcome by varying just that condition while holding fixed all other possible conditions.
◉	○	○	31. Data Coupling – Are there test cases which exercise "data coupling" between software modules (i.e., the dependence of a software component on data not exclusively under the control of that software component)?
◉	○	○	32. Data Coupling – Are there test cases which exercise "control coupling" between software modules (i.e., the manner or degree by which one software component influences the execution of another software component)?
○	○	◉	33. Error Guessing - Do areas in the software known to have complex algorithms have a sufficient number of test cases to ensure they are working as expected?
○	○	◉	34. Error Guessing - Do areas in the software associated with complex requirements have a sufficient number of test cases to ensure they are working as expected?
◉	○	○	35. Outputs - Are all test case outputs measured for at least two different values?
◉	○	○	36. Outputs - Have variables with expected output values been initialized to other values before input to the test process (e.g., If a variable is expected to have an output result of TRUE, is the input state of this variable set to FALSE before executing the test case?)
◉	○	○	37. Coverage Analysis - Are the entire test paths covered as per the structural coverage requirements mandated for Flight Management Systems? If not, are such structural coverage deficiencies dispositioned? If not determined to be a tool problem, then the disposition must reference to an SCR.
○	○	◉	38. Coverage Analysis - For uncovered requirements, is there another test that provides the coverage?
○	○	◉	39. Has the Test name and Anchor required if one exists, been identified? If not, has an SCR been written and the SCR number referenced?
○	○	◉	40. Coverage Analysis – Have all the failures been analyzed and disposed appropriately in the DSP quoting a correct SCR number documenting the reason for the failures.

Yes	No	N/A	Polymorphism Related Issues (C++)
○	○	◉	41. Has the code under test been examined for the existence of dynamic dispatch (can be determined by virtual functions in the code or a virtual table in the assembly code)?
○	○	◉	42. Does each test case appearing in the set of test cases associated with a class appear in the set of test cases associated with each of its subclasses?
○	○	◉	43. If dynamic dispatch is involved in the execution of a function, is the method separately tested in the context of every concrete class in which it appears, irrespective of whether it is defined by the class or inherited by it? An exception is made for simple get and set methods that only assign a value to, or return the value of an attribute or association. Such methods need only be tested once, in the context of the defining class.
◉	○	○	44. Are errors dispositioned to an SCR or has the test been updated?

Yes	No	N/A	Other
○	◉	○	45. Are all defects identified by the previous questions?

N N/A Justification Box

N/A:
For item 4, TRT file is not updated.
For item 22, there is no bad trace.
For item 29,30, this CTP test follows Level B standard.
For item 33,34, there are no "complex algorithms" or "complex requirements" for this CTP.
For item 38,39, there are no uncovered requirements in this CTP.
For item 40, there are no failures in this CTP.
For item 41-43, there is no C++ code or C++ stub code.
NO:
For item 45, please refer to check list item 45.

Title: Create new SCR

Description:

updated the CTP_A340S1A_PERF_DESPATH_CALC_CC_RATE.TDF not for the requirement changed.

SRB Reviewed By: O'Connor, Michael Date: 24-OCT-2014

Analysis/Solution:

Updated CTP_A340S1A_PERF_DESPATH_CALC_CC_RATE(TDF:2,ZIP:3)for A340 S2 CR2
SER430
on Build ST2099.
TDF(Gen=2)
1.Updated the TDF from the matrix to sequence format.
2.Updated SRD/SDD generation:
11_10_1.SRD;32-->47
11_2_1_7.SRD;31-->42

PERF_TDPC_EXEC.SDD;64-->106
3.Updated the PDB file from "D:\Database\PS203C-00077_88780000.o"
to "A:\Loadable_DBs\PDB_PS203C-00283_88780000.COFF".
ZIP(Gen=3)
1.Updated the Rst,Rpt,Dsp file.

Elements Affected:

Doc.	Element	Generation
TEST	CTP_A340S1A_PERF_DESPATH_CALC_CC_RATE.TDF	2
TEST	CTP_A340S1A_PERF_DESPATH_CALC_CC_RATE.ZIP	3
